Otovo and InCharge Energy Partner to Offer Solar, Battery Storage and EV Charging Services Across U.S.

Launching in California, Arizona, Texas, and Florida, with additional state launches planned by the end of 2026

HOUSTON, TX and LOS ANGELES, CA, September 24, 2026 – Otovo ASA (Euronext Oslo Børs: OTOVO; "Otovo"), a leading provider of behind-the-meter energy services for homes and businesses, today announced a service partnership with InCharge Energy ("InCharge"), a trusted national provider of EV charging installation and maintenance services. By combining their service offerings, which together span more than 100,000 energy assets, Otovo and InCharge can provide commercial customers with a single service relationship covering solar, battery storage, and EV charging equipment across key U.S. markets.

Together, Otovo and InCharge will offer each other's preventive maintenance plans, with each company dispatching its own technicians, expanding the footprint and capabilities of each service provider. Otovo will bring its Endurance™ AI platform to the shared work, so a job originating with either company is logged, dispatched and closed against one record of the site. Each company continues to sell and perform under its own brand.

InCharge Energy operates more than 40,000 EV chargers across the U.S.

"We built this partnership around a simple idea: a customer shouldn't need multiple vendors just because their energy assets came from different systems," said William J. (John) Berger, Chief Executive Officer of Otovo. "By joining forces on commercial energy service, we can seamlessly

integrate work orders through Endurance™, giving customers one call and one relationship instead of separate vendors and contracts for every system on site."

“Technology alone doesn’t keep critical energy infrastructure operating – it takes highly-skilled people in the field,” said Rich Mohr, Chief Executive Officer of InCharge Energy. “Otovo and InCharge have both made significant investments in technical talent and electrical field service capabilities, and we will continue to invest as these systems become more critical to our customers’ operations. By utilizing InControl™ and Endurance™ together, we can bring better asset intelligence to our field teams and enable a more proactive approach to how EV charging, solar, battery storage and supporting electrical infrastructure are managed and maintained.”

The partnership draws on established scale on both sides. Otovo currently services more than 60,000 customers, and InCharge’s InControl software platform connects and supports more than 40,000 EV charging assets across more than 1,060 completed infrastructure projects. In 2025, InCharge’s team completed more than 24,000 support cases, resolving approximately 80% of charger issues remotely, with the InControl platform maintaining 99.99% uptime.

InCharge’s broader network spans every U.S. state and Canadian province, supported by regional sales and service offices in Los Angeles, CA, Richmond, VA, and Fort Worth, TX, and includes more than 100 field service staff. That scale underpins the companies’ plans to expand this partnership into new markets.

Work orders will pass directly between Otovo and InCharge, with Endurance™, Otovo’s industry-leading AI platform, handling intake, dispatch and scheduling on the Otovo side. Each company will act as a reseller of the other's preventive maintenance plans in the launch geographies, holding its own customer relationship. Pricing on the reciprocal plans is matched between the companies.

The partnership addresses a structural gap for commercial sites carrying multiple energy assets. A property with rooftop solar, battery storage, EV chargers and a backup generator typically holds a separate contract, a separate response commitment and a separate point of contact for each one.

About InCharge Energy
InCharge Energy is a full lifecycle energy infrastructure partner, delivering EV charging, electrical and lighting, and distributed energy solutions. InCharge supports customers from initial concept and construction through long-term ongoing operations and maintenance. By providing one accountable partner across the energy lifecycle, InCharge Energy helps organizations operate more reliably, scale with confidence, and reduce total cost of ownership through best-in-class service and maintenance. More information is available at www.inchargeus.com.

About Otovo
Otovo is an AI-Native behind-the-meter energy services company serving homes and businesses across 15 European markets, Israel and the United States. Otovo combines equipment monitoring, rapid repairs, dependable power supply and grid participation in one service. Endurance™, Otovo’s AI platform, monitors installed equipment, optimizes service from

problem detection to resolution and coordinates repairs around the clock. “Your Power, Backed by Ours™.” Otovo is listed on Euronext Oslo Børs under the ticker OTOVO. Visit us at www.otovo.com.
